Churchyard Biodiversity Project – Friday 24th November

Castlemorton Environmental Group together with Castlemorton CE Primary School have taken the first step towards making St Gregory's churchyard more biodiverse by planting bulbs in the southern part of the churchyard.

The day was fine, and waves of children came across the road from the school under the supervision of their Head of School Amanda Smithson. They were helped to plant the bulbs by parents, school staff and volunteers from the environmental group. Over 1300 native bluebells, crocuses and wild daffodils were planted during the afternoon and the children had a great time. Many thanks also to the school who provided refreshments.

The bulbs will provide an early food supply for insects and provide spring colour in the churchyard.

The collaboration between school, church and environmental group is a fine example of the community working together to help the environment and all parties hope to continue the initiative as we go on to introduce pollinator beds and manage areas of the churchyard for wild flowers.
